We can configure your site to your requirements from small single lane cafes to multi lane venues, you could also use wireless devices if you wish. SwiftPOS software developed by Samford Software who have been established for over 15 years developing POS software and with over 4,000 Venue installations, including the new EDEN Park Stadium - Samford Software is a leader in the Australia & New Zealand Hospitality Industry and has installations in over 10 countries around the world.

Support and Training

We will support the hardware and software 24 hours a day, 7 days a week to ensure you are fully supported when you really need it. We will provide you with any training you require to get the best out of the system.

We currently use a mix of stylish HP and VPOS hardware which have a proven track record at our current sites. We can integrate many peripherals – Widely Hand Held’s, Printers, Bar Code Scanners, EFTPOS, Scales and Customer Displays.

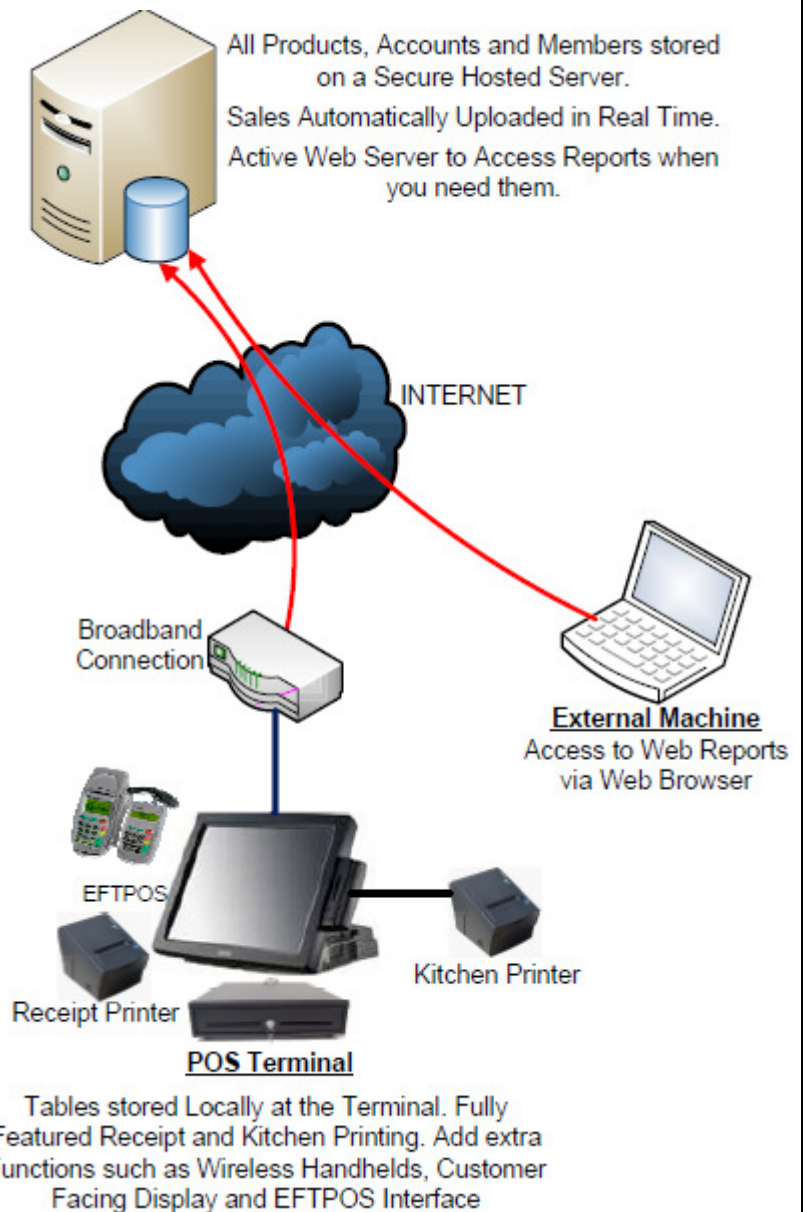

How it Works

The database of all products, account and members is stored on a secure hosted server which we take care of.

All data can be retrieved via various reports which you can access via a web browser such as Internet Explorer or Firefox.

All sales are sent to the secure server via the internet and any product changes are uploaded. Any changes will need to be requested twice weekly so they can be uploaded before you start trading.

Account and member information is sent and received when you need it.
